I have a GitHub account!

I have programming expertise in the following languages

I am comfortable using

What are the differences between cloud and local computing?

10 responses

cloud does not need super computing power for data analysis

Cloud- easily accessed by multiple users at a time unlike local computing

Cloud- easily accessed by multiple users at a time unlike local computing

Virtualization is a technology that allows you to create multiple simulated environments or specialized resources from a single physical system

Cloud: work is decentralisedLocal: not easily accessible

Cloud computing is very interactive and ease collaboration
Local allows to keep the control over the computer programs

Clouds store the data for long with local computing if the machine is destroyed the data may be lost unless it is stored in another device

Low risk of job failure when using Cloud

the cloud is easily, the local computer no garanti

Docker is...
